

PRODUCT UPDATE

Airport Report templates

AC-U-KWIK

Osprey is updating our airport report templates; we have added additional airport information to our standard reports to ensure we provide the most relevant and valuable information to our clients.

Based on client feedback we are improving our airport reports available to download in the system through the addition of operational information provided by AC-U-KWIK. The additional data has been added to help you make operational decisions around which airports to fly to (both as divert options and regular routing). The reports will now provide you with a combination of security risk advice and operational information in one place to make this process more efficient.

The new information will enable you to make key decisions such as, what time of day you can land, what level of protective services are available locally, and which hotels should air crew members use if overnighting.

The additional data will be configurable via the existing template customisation area in the platform, you can choose to enable and disable specific categories of third party data depending on your needs.

Airport Report

Created for: Bruce Norfolk

Airport Name
LONDON HEATHROW AIRPORT (EGLL/LHR)

Airport Level of Risk: Low

Airport Risk Mitigation - Security Recommendation Summary
